- a screw shaft coaxially fixed with a rotary shaft of the motor;
 - a nut fixed with the force application shaft and threaded with a screw of the screw shaft;
 - a stabilizing mechanism engaging the force application shaft to prevent rotation thereof;
 - an elastic body disposed on the axis of the force application shaft through which the force exerts; and
 - an electromagnetic brake disposed on the rotary shaft of the motor,
- whereby a rotary force output from the rotary shaft of the motor is converted into a reciprocating motion of the force application shaft which in turn applies a force to the welding equipment;
- the prior art's references of record do not disclose the combination of structures used to apply the force on the welding equipment.
